

Rotational Viscometer

The MERLIN from ATS RheoSystems is a high-performance rotational viscometer capable of both steady-shear and yield-stress testing in a rugged, compact footprint. Designed for performing both routine rheological tests such as single-point viscosity checks for quality control to complex rheological evaluation for R&D, this viscometer is ideal for investigating the mixing, stirring and process flow characteristics of fluid systems. The unit comes with built-in Peltier Temperature Control for all measurement systems.

Condition Monitoring Services

WATCHMAN Reliability Services from Azima DLI combine the industry's most advanced and reliable analytical software with remote monitoring capabilities to deliver solutions ranging from subscription-based vibration analysis to advanced on-site technical assistance. Aimed at transforming current machine condition monitoring practices, WATCHMAN Reliability Services help industrial plants implement high-quality, sustainable condition monitoring programs.

Oil-Rite Lubrication System

Oil-Rite has designed a compact, efficient lubrication system specifically suited to CNC machinery. The core component of the system is PurgeX, Oil-Rite's patented dispensing technology. Contained within the 4-inch aluminum PurgeX body are the mechanics necessary for precise, repeatable lubrication cycles. The pump uses a burst of compressed air to move a stainless steel piston. That movement clears the internal chamber of its contents while achieving a 9:1 ratio of force.

Deep Penetrating Oil

Free All Deep Penetrating Oil is now available in a 12-ounce "bullet" style can. Free All utilizes a proven formula that quickly and easily dissolves rust and corrosion and prevents the need for torching, drilling, hammering and chiseling to free virtually any frozen fastener or part. The formula contains a special rust-eating agent that is ideal for industrial applications. Unlike several competing products in the rust-penetrant category, Free All is free of harmful silicones, making it safe for use around painted surfaces.

Drive-Over Drain Cover

The PIG Drive-Over DRAINBLOCKER drain cover stands up to heavy traffic while providing drain protection, indoors or out. The product resists punctures, tearing, abrasion and UV rays and is durable enough for repeatable use under heavy traffic from tankers, trucks and forklifts. Ideal for use as a preventive measure and in emergency response, it eliminates the need to frequently deploy and remove a temporary cover or to permanently seal a drain. It resists water, oil and many chemicals.

MFD Contamination Remover

Schroeder Industries offers the MFD for the removal of particulate contamination. The MFD removes particulate contamination and/or water quickly, conveniently and economically. It is perfect for clearing up existing systems as well as for prefiltering new fluids, since new fluids often have contamination levels significantly higher than that recommended for most hydraulic systems. This dual-filtration system features a modular base that eliminates hoses and fittings between components.
